WEEK 6: ADVANCED PYTHON FOR DATA ANALYSIS

AAPL Stock Market Historical Data Analysis Report

Intern: Ndubuisi Favour Adaku

Organization: AnalystLab Africa - Batch B

Program Period: June - August 2026

Analysis Date: July 9, 2026

Dataset Period: July 8, 2021 - July 8, 2026 (5 Years)

EXECUTIVE SUMMARY

This analysis examines 5 years of Apple Inc. (AAPL) historical stock data using advanced Python techniques including data transformation, time-series analysis, and feature engineering. The study reveals a strong uptrend in AAPL stock price over the 5-year period, with clear patterns in trading volume and returns distribution.

1. DATASET OVERVIEW

Dataset Characteristics

Total Trading Days: 1,254 records
Date Range: July 8, 2021 - July 8, 2026
Features Captured: Open, High, Low, Close, Adjusted Close, Volume
Data Quality: No missing values; all records complete and valid
Source: Yahoo Finance API via yfinance library

Data Distribution

Starting Price (July 2021): $139.63
Ending Price (July 2026): $300+ (trending upward)
Overall Return: ~115% over 5 years
Trading Volume: Average 50-75 million shares daily

2. FEATURES CREATED FOR ANALYSIS

Feature	Purpose	Calculation
Daily_Change	Intraday price movement	Close - Open
Daily_Return_%	Percentage change	(Close - Open) / Open × 100
MA_7	Short-term trend	7-day rolling average
MA_30	Medium-term trend	30-day rolling average
Price_Range	Daily volatility	High - Low

3. KEY FINDINGS & INSIGHTS

Finding #1: Strong 5-Year Uptrend

AAPL has demonstrated sustained price appreciation with minor corrections. The moving average crossovers consistently signal buy opportunities, indicating institutional confidence in the stock.

Finding #2: Volume Confirms Trend

Trading volume increases during price rallies and decreases during consolidation, confirming the legitimacy of the uptrend and suggesting genuine buying pressure.

Finding #3: Manageable Volatility

Daily volatility averages ~2.2%, with returns typically ranging from -8% to +8%. This volatility level is manageable for most investors and indicates healthy price discovery.

Finding #4: Positive Return Distribution

The daily returns distribution is slightly right-skewed, with more positive days than negative. Mean daily return is positive, confirming the overall uptrend bias throughout the 5-year period.

4. TECHNICAL SKILLS DEMONSTRATED

Python Libraries Used

yfinance: Data acquisition from Yahoo Finance
pandas: Data manipulation and transformation
numpy: Numerical computations
matplotlib: Data visualization
seaborn: Statistical visualizations

Advanced Techniques Applied

✓ Time-series data handling and manipulation
✓ Rolling window calculations for trend analysis
✓ Feature engineering and data transformation
✓ Multi-timeframe trend identification
✓ Distribution and volatility analysis
✓ Professional data visualization creation

5. RECOMMENDATIONS

For Investors

1. Hold Position: Strong long-term uptrend intact. Continue holding for appreciation.
2. Add on Dips: Use 7-day MA as entry point during pullbacks.
3. Take Profits: Consider partial exits at resistance levels (new 52-week highs).
4. Diversify: Maintain portfolio diversification to manage concentration risk.

For Traders

1. Use Moving Averages: Trade pullbacks to 30-day MA for swing trades.
2. Volume Confirmation: Only enter positions when volume supports price movement.
3. Risk Management: Set stop-losses below 90-day MA for longer holds.
4. Earnings Awareness: Expect volatility around quarterly earnings (±5-8%).

6. CONCLUSION

The 5-year analysis of AAPL stock data reveals a compelling investment case with sustained uptrend across multiple timeframes, healthy volume confirming price movements, manageable volatility suitable for most investors, and clear technical patterns enabling tactical opportunities.

This analysis demonstrates the power of Python-based financial data analysis for uncovering actionable insights from historical market data. The combination of data transformation, time-series analysis, and feature engineering provides a solid foundation for investment decision-making and real-world data analytics applications.

KEY STATISTICS SUMMARY

Metric	Value
Total Return (5 years)	~115%
Daily Volatility	~2.2%
Trading Days Analyzed	1,254
Start Price	$139.63
End Price	$300+
Current Trend	Strongly Bullish
